

Stroud Center Stream Ecology Programs

A Boots-in-the-Water Experience for Your Students

Far from the classroom, students will explore the White Clay Creek and surrounding watershed. STEM-related activities include collecting and identifying aquatic bugs, performing water chemistry experiments, and learning how scientists determine the health of streams and rivers.

Explore Our LEED Platinum-Certified Education Center

The Moorhead Environmental Complex is a model for sustainable water use, conservation, and green building design serving as an example of freshwater stewardship in action.

Programs Focused on Science and Stewardship

Stroud Center is a working laboratory. Education programs developed from our scientists' research include STEM content in chemistry, stream ecology, watersheds, entomology and environmental stewardship.

Program Scholarships Available!

There are several funding sources that allow the Stroud Center to offer programs at no or reduced cost for your school. If you can't come to us, no problem; we'll come to you. So schedule a program for your class!
